Four Stage Purification Process

- Stage 1 ***5 Micron Sediment Filter:*** Removes dirt, sediments, sand, and other physical particles.
- Stage 2 ***Carbon Block:*** Reduces chemicals such as chlorine, that may be present in your water supply.
- Stage 3 ***Reverse Osmosis Membrane:*** 50 gallon per day membrane removes 93-97% of dissolved minerals, salts and other contaminants in the water supply.
- Stage 4 ***Post Carbon Filter:*** A final polishing process that enhances and clarifies your drinking water.

PureValue Reverse Osmosis System

Reverse Osmosis is the most effective and economical way to provide your family with high quality drinking water. Reverse Osmosis is the process by which water molecules are forced by your household water pressure through a semi-permeable membrane. Contaminants are rinsed to the drain while your high quality filtered water is stored in the holding tank.
